#### General Repeater Information

- Always ID properly. A good way to stay legal is to ID every time you hear the repeater's automatic CW 10 minute ID and at the end of your final transmission.
- <u>Anti-Kerchunker Feature</u>: To use the repeater without cutting off the first part of your initial transmission, you must key your rig then pause for 1 second <u>before</u> speaking. Once the repeater is active, the anti-kerchunker feature is disabled until the repeater has been inactive for 20 seconds. This helps prevent the repeater from "cycling" usually because someone is testing their rig by keying without audio. Remember to identify I/A/W FCC rules anytime you use the repeater (even for testing)

# • <u>DTMF Test Pad Feature</u>: You can test your DTMF codes by entering **#0**, then key and enter a DTMF code and unkey. If the repeater decodes your entry, it will respond with that code in CW. An "S" will be sent for the "\*" code and a "P" will be sent for the "#" code. This DTMF Test Pad feature will automatically disable after 15 seconds of inactivity or enter **#1** to disable.

#### <u>Temporary PL Override Feature</u>:

You can temporarily disable the PL by entering **\*77** at which time the repeater will be in carrier mode only (i.e., No PL required). This override feature will automatically disable after 20 seconds of inactivity or enter **\*77** again to immediately reactivate the PL. **NOTE:** If you encounter a band opening when the PL is disabled, the repeater will "hang up" until the 3 minute timer disables it or you can enter **\*77** to immediately reactivate the PL.

- Force the CW ID Feature: To hear the CW ID, key then enter #9
- Force the Voice Announcement Feature: To hear the Voice Announcement, key then enter #7
- Invalid DTMF Code Disable Feature: Every time a DTMF code is entered, a recorder is started.
  After a certain number of invalid codes, the DTMF decoder will be disabled; a Control Operator will need to reactivate it. This feature prevents an undesirable user from trying random DTMF codes until something happens.
- <u>Repeater Status Codes</u>: At the end of the "W8HUF/R" CW ID you may hear Status Codes sent in CW for the **Repeater Status**: "P" means PL active, "B" means running "Barefoot", No status code means it is in "Carrier Mode" (No PL Required), "D" means it is deactivated (heard only at shutdown)

### **General Phone Patch Procedures**

- Limited to local calls and certain near zone exchanges all other calls are blocked
- Always identify before making a phone patch: "This is [Your Callsign] requesting the auto-patch"
- **To contact 911**: Key up and enter **911** which sends you directly to the dispatcher's phone and <u>NOT</u> through the 911 system (as requested by the 911 Director).
- All Phone patch activity will be tape/digitally recorded to ensure FCC rules are being followed. Unless overridden (see below), phone patches are limited to 3 minutes.
- Once you are connected be certain that the person you called understands that "This is a Phone Patch and only one of us can talk at a time can you hear me, OVER?" The person called will quickly understand this procedure if you use the word, "over".
- When you complete the phone patch & your transmission is ended, remember to ID I/A/W FCC rules
- If you have any problems, call a control operator for assistance there are a number of control operators available to assist you

### To access the phone patch using the Direct Dial method:

- Enter \*41 and unkey. You should hear a dial tone
- Key your transmitter and enter the telephone number you are calling <u>OR</u>
- Enter \*41 and immediately enter the telephone number you are calling
- To bring down the patch after your call is complete, enter #1
- If there are warning tones for the patch time out, enter the number 4 (this resets the 3 minute timer)

## To access the phone patch using the Autodial Slot:

- Key your transmitter and enter the 4 digit Autodial including the # (i.e., **#xxx**)
- To bring down the patch after your call is complete, enter #1
- If there are warning tones for the patch time out, enter the number 4 (this resets the 3 minute timer)
